

Here are a list of resources outside of Udacity and Masterschool that helped me complete this project:

<https://stackoverflow.com/questions/68458612/converting-txt-file-to-load-into-dataframe>

- This helped me import a txtfile to a dataframe, where the text file had the format of a json file.

[https://www.w3schools.com/python/python\\_regex.asp](https://www.w3schools.com/python/python_regex.asp)

- This page I learned what regex are, which was a big help for iterating the list of words created through the text columns.

<https://pandas.pydata.org/pandas-docs/stable/index.html>

- The Pandas documentation site was used a lot to look back on functions that I learned in the past, as well as learn new ones that helped me with this project.

<https://www.pythoncharts.com/matplotlib/rotating-axis-labels/>

- Helped with a couple details on my visualization.
